KRISHNAIK ACADEMY

AI For Everyone

2026 Edition

Detailed Curriculum

About The Program

This comprehensive 3-month program is designed for beginners, professionals, and leaders across all domains : Engineers, Product Managers, Sales Professionals, Marketing Teams, HR Leaders, Operations Managers, Consultants, Entrepreneurs, and students. The course begins with foundational AI concepts explained through visual learning, then rapidly progresses to hands-on building of content systems, applications, automations, and AI-powered workflows using no-code tools.

Target Audience

Beginners, Professionals & Leaders from Product, Sales, Marketing, HR, Operations, Consulting, and Business domains

Session Format

90-120 minute live sessions with hands-on practice

Learning Method

Visual explanations + **Live** demos + **Hands-on** builds

Prerequisites

Basic computer skills - **NO coding background** required

Focus Split

20% Concepts + 80% **Hands-On Building**

Career Impact

Immediate workplace application and **competitive** advantage

KRISH NAIK ACADEMY

Tools Covered

AI Assistants	Claude.ai, ChatGPT, Gemini 2.0, Microsoft Copilot
Research	Perplexity AI, NotebookLM, Google AI Studio, Fathom, Otter.ai
Writing & Content	Jasper, Copy.ai, Grammarly AI
Automation	n8n, Make, Zapier
Agentic AI	n8n AI Agent, VAPI (Bonus)
No-Code Apps	Lovable, Bolt.new, v0 by Vercel
Image & Design	Midjourney v7, Ideogram, Adobe Firefly
Video & Voice	HeyGen, Sora, Runway ML Gen-4.5, Kling AI 2.5, Pika 2.5, Veed.io
Data & Analytics	Julius AI, Tableau AI, Power BI AI
Presentations	Gamma, Beautiful.ai, Tome

Tool images are for demonstration only and do not represent the complete or final tool list.

KRISHNAIK ACADEMY

Advanced Reasoning & Analysis

Break down complex problems, analyze reports, and generate structured insights for business decisions.

Document Intelligence

Upload PDFs, contracts, and reports to extract summaries, key insights, and actionable outputs.

Professional Writing

Create high-quality emails, proposals, reports, and long-form content with clarity and consistency.

Workflow Automation with AI

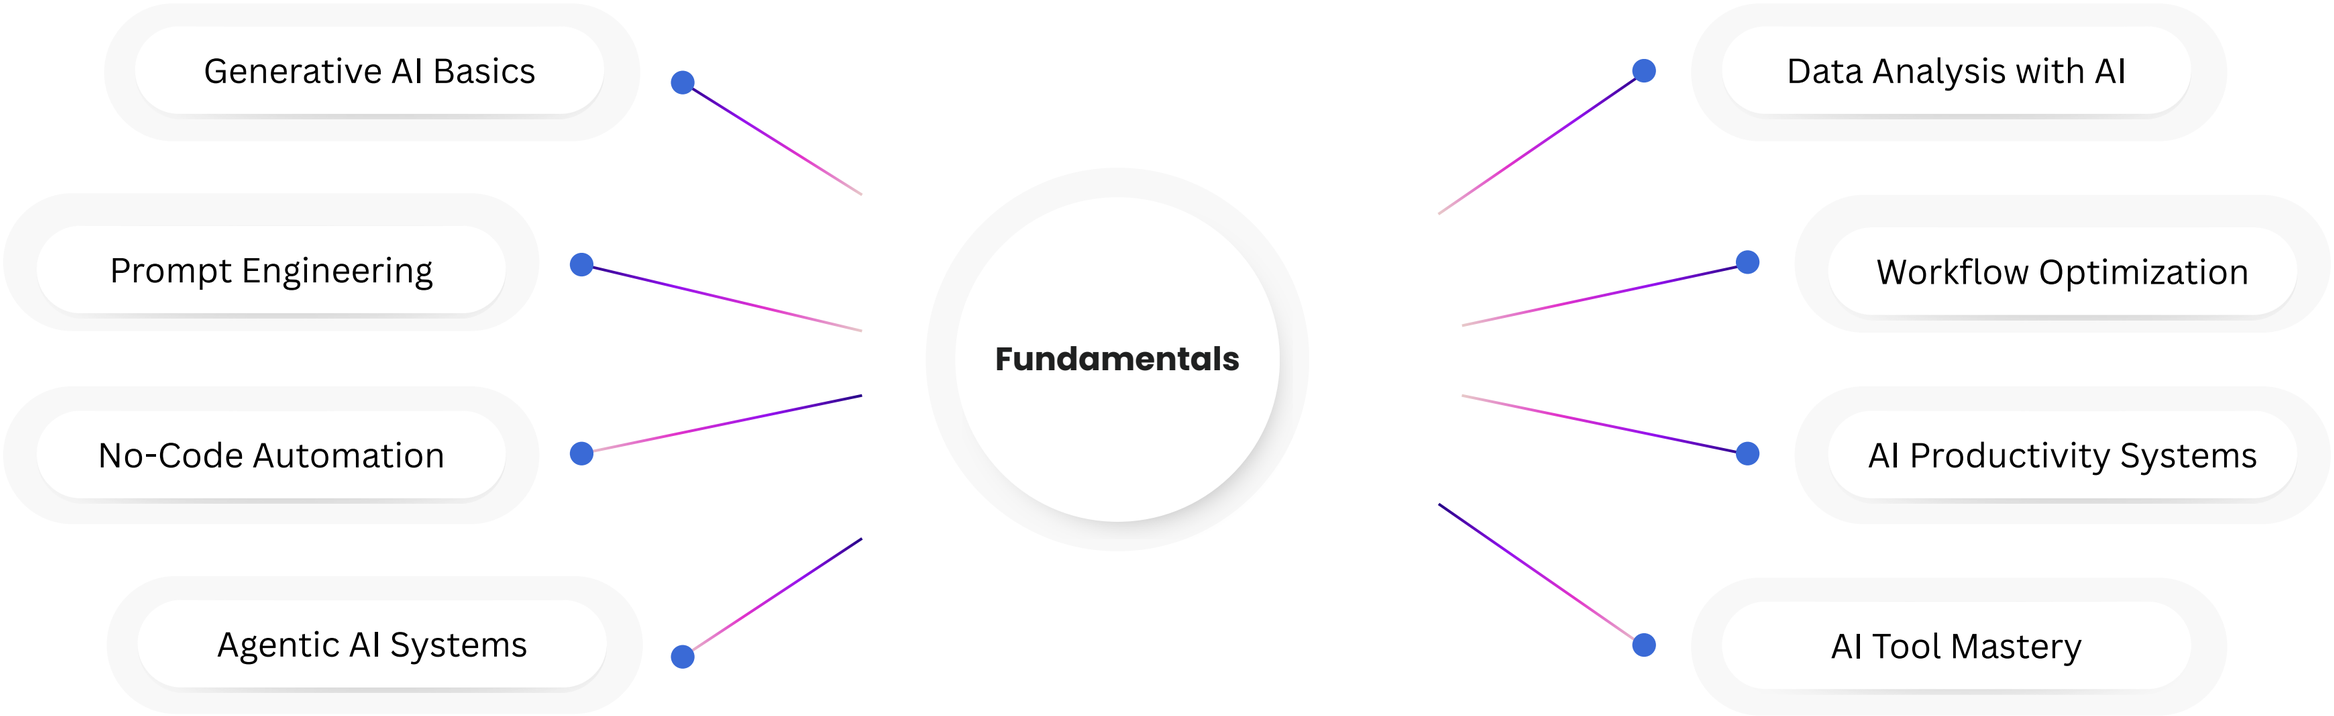

Integrate Claude into automation workflows to summarize, classify, and generate outputs at scale.

Claude In This Program

This program uses Claude as a core AI assistant for deep thinking, structured writing, and real-world business workflows.

***Used by professionals for analysis, decision-making, and high-quality business outputs.**

KRISH NAIK ACADEMY

Generative AI Basics
Prompt Engineering
No-Code Automation
Agentic AI Systems
Fundamentals
Data Analysis with AI
Workflow Optimization
AI Productivity Systems
AI Tool Mastery

Projects You'll Build

AI Content Engine

Transform a single idea into a complete week of automated blogs, social content, visuals, and campaign assets.

AI Sales System

Automate prospect research, generate personalized outreach, and streamline modern sales workflows with AI.

AI HR Ops Hub

Simplify hiring, onboarding, employee support, and people operations through intelligent AI systems.

PM Intelligence

Turn scattered user feedback into clear insights, priorities, and smarter product decisions.

AI Business Hub

Automate core business operations, client workflows, reporting, and decision-making with AI systems.

Who This Program Is For?

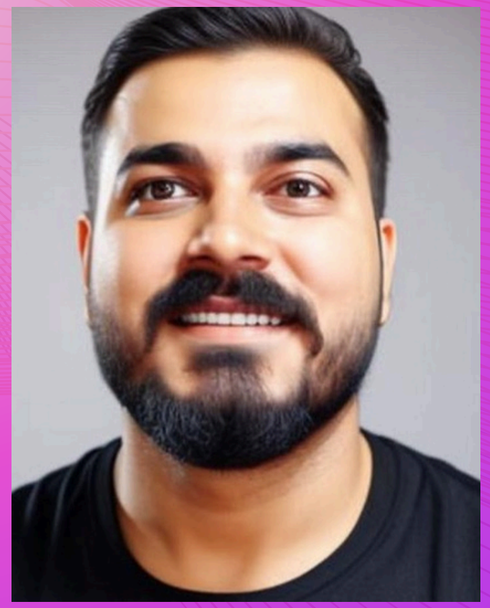

Leaders, professionals, and decision-makers who want to use AI to build, automate, and transform their work without getting technical. Perfect for CEO VPs, directors, managers, and professionals across functions driving executio productivity, and innovation. If you want practical AI skills (not just theory), th is your roadmap.

Perfect for those who need to:

- Build AI-powered tools, workflows, and systems without coding.
- Automate repetitive work, analyze data, and improve daily productivity.
- Lead AI adoption across teams while creating real, measurable impact.

Curriculum

AI Foundations & Landscape

Understand how AI works, why it matters now, and how to start using it effectively in your professional workflows.

AI Fundamentals Explained Visually

Learn how AI systems work through simple visual explanations, including tokens, context, prompting, and how AI generates responses.

AI Landscape & Tool Selection

Explore the leading AI models and tools, understand when to use each, and build your personal AI toolkit for everyday tasks.

- AI fundamentals
- Tool selection
- Prompt basics
- AI literacy

AI Assistants Mastery

Master the most powerful AI assistants and learn how to apply them across real professional use cases.

Using AI Assistants for Work

Leverage tools like ChatGPT, Claude, and Gemini for writing, analysis, research, and day-to-day professional tasks.

Advanced Features & Decision Frameworks

Utilize advanced capabilities such as memory, document analysis, and multimodal inputs while choosing the right assistant for each task.

- Prompt usage
- Tool comparison
- Workflow execution
- Decision frameworks

Curriculum

Prompt Engineering & AI Playbooks

Learn how to communicate effectively with AI systems to produce high-quality, consistent outputs.

Prompting Frameworks & Techniques

Apply structured prompting methods such as role-based prompting, few-shot learning, and step-by-step reasoning to guide AI outputs.

Building Prompt Libraries & AI Systems

Create reusable prompt templates and structured AI playbooks for consistent performance across tasks and teams.

- Prompt design
- Output consistency
- A/B testing
- AI playbooks

AI for Research & Productivity

Use AI tools to accelerate research, extract insights, and optimize daily productivity workflows.

AI Research & Knowledge Systems

Leverage AI tools to perform real-time research, analyze documents, and build knowledge systems for faster decision-making.

AI Productivity Workflows

Automate daily workflows including email processing, meeting summaries, and decision support using AI assistants.

- Research optimization
- Knowledge management
- Workflow automation
- Productivity systems

Curriculum

AI Writing & Content Systems

Create high-quality content and communication workflows using AI tools for marketing, business, and professional use.

AI Writing & Communication

Generate professional content including emails, reports, and marketing materials while maintaining tone and brand consistency.

Content Pipelines & Automation

Build scalable content systems that transform a single idea into multiple formats across blogs, social media, and campaigns.

- Content automation
- Brand consistency
- Communication design
- Content pipelines

AI Presentations & Data Storytelling

Transform data and ideas into impactful presentations and business insights using AI tools.

AI Presentations & Visual Storytelling

Create professional presentations and visual narratives from simple inputs using AI-powered tools.

Data Analysis & Business Insights

Analyze datasets, generate insights, and build dashboards to support data-driven decision-making.

- Data visualization
- Storytelling
- Insight generation
- Presentation design

Curriculum

AI Image Generation & Design

Create high-quality visual assets and brand designs using AI-powered image generation tools.

AI Image Generation Tools

Generate realistic visuals, product mockups, and marketing creatives using modern AI image tools.

Brand Asset Creation at Scale

Build scalable design workflows for consistent brand visuals across campaigns and platforms.

- Visual design
- Asset generation
- Brand consistency
- Creative workflows

AI Video & Voice Production

Build end-to-end multimedia production pipelines using AI for video, voice, and audio content.

AI Video Creation

Produce marketing, training, and social media videos using AI tools without traditional production setups.

AI Voice & Audio Systems

Generate voiceovers, audio content, and music while integrating them into automated content pipelines.

- Multimedia production
- Audio generation
- Video automation
- Content pipelines

Curriculum

No-Code AI App Development

Build and deploy AI-powered applications without coding using modern no-code platforms.

No-Code App Builders

Use AI-powered platforms to create web applications, dashboards, and tools using natural language.

Building Business Applications

Design internal tools and client-facing apps that solve real business problems using AI.

- App development
- Product thinking
- Rapid prototyping
- Deployment

Automation Foundations (Zapier & Make)

Learn how to automate workflows across tools and eliminate repetitive tasks using no-code automation platforms.

Automation Thinking & Workflow Design

Understand how to identify automation opportunities and design workflows using triggers, actions, and conditions.

Building Automated Workflows

Create multi-step automations that connect apps, process data, and execute business tasks automatically.

- Workflow design
- Process automation
- Task automation

Curriculum

Advanced Automation & AI Agents (n8n)

Build advanced automation systems and AI agents that can perform tasks autonomously across tools and workflows.

n8n Workflows & System Integration

Design complex workflows that connect APIs, automate processes, and manage data across systems.

AI Agents & Autonomous Systems

Create AI-powered agents that can reason, take actions, and collaborate to complete multi-step workflows.

- Agentic workflows
- API integration
- Automation architecture
- System design

AI Strategy, Career & Future Readiness

Develop a clear roadmap to implement AI and position yourself as an AI-driven professional, and stay ahead of future advancements.

AI Business Roadmap & Implementation Strategy

Design a practical AI adoption plan, prioritize high-impact use cases, and establish governance frameworks to safely and effectively scale AI across teams.

AI Career Growth & Future Readiness

Position yourself as an AI-first professional by building a strong portfolio, leveraging thought leadership, and staying ahead of emerging AI trends and technologies.

- Strategic planning
- AI adoption
- Career positioning
- Continuous learning

Capstone Project

AI Content Engine

Build an automated AI content system that transforms idea into multi-platform content for continuous marketing and brand growth.

Designing a Multi-Channel Content Pipeline

Create workflows that turn one topic into blogs, social content, visual assets, and video-ready outputs across multiple channels.

Automating Content Production & Distribution

Build systems that automate content generation, publishing workflows, and ongoing content operations with minimal manual effort.

- Content automation
- Workflow design
- Multi-channel marketing
- AI media systems

AI Sales System

Build an AI-powered sales intelligence system that automates research, personalized outreach, and sales preparation workflows.

Automating Prospect Research & Insights

Create systems that gather prospect data, identify opportunities, and generate actionable intelligence for faster sales preparation.

Personalized Outreach & Sales Operations

Design workflows that generate tailored outreach assets, organize lead data, and streamline sales follow-up processes.

- Sales automation
- Prospect intelligence
- Personalization systems
- Revenue workflows

Capstone Project

AI HR Ops Hub

Build an intelligent HR operations system that improves employee support, hiring and onboarding experiences through automation.

AI for Hiring & Employee Support

Create AI systems that answer internal queries, assist employees, and streamline candidate evaluation processes.

Automated Onboarding & HR Workflows

Build workflows that automate onboarding tasks, communications, and people operations processes across the employee lifecycle.

- HR automation
- Employee experience
- Hiring systems
- Workflow orchestration

PM Intelligence

Build a product intelligence system that transforms raw feedback and operational data into insights and decision-ready outputs.

Feedback Intelligence & Insight Generation

Design systems that collect, organize, and analyze user feedback to uncover trends, opportunities, and product priorities.

Product Reporting & Strategic Decision Support

Create automated reports, visual dashboards, and presentation-ready outputs to support product planning and sprint execution.

- Product analytics
- Insight generation
- Prioritization systems
- Strategic reporting

Capstone Project

AI Business Hub

Build an AI-powered OS that automates core business functions for freelancers, consultants, and small business owners.

Client Operations & Lead Management

Create systems that manage inquiries, collect client requirements, and automate lead handling from first contact to proposal stage.

Business Automation & Executive Dashboards

Build workflows that automate recurring business operations while generating performance summaries, revenue insights, and decision dashboards.

- Business automation
- Client systems
- Operational efficiency
- Decision intelligence
