KRISH NAIK ACADEMY

AI For Professionals & Leaders

Live Batch

Detailed Curriculum

About The Program

This comprehensive 2-2.5 month program is designed for **technical** and **non-technical professionals** and **leaders** across **all domains** - Engineers, Product Managers, Sales Professionals, Marketing Teams, HR Leaders, Operations Managers, Consultants, and Entrepreneurs. The course begins with fundamental AI concepts explained through visual learning, then progresses to practical implementation using **no-code** tools.

Target Audience

Professionals & Leaders from Product, Sales, Marketing, HR, Operations, Consulting, and Business domains

Session Format

90-120 minute live sessions with hands-on practice

Learning Method

Visual explanations + **Practical** implementation

Prerequisites

Basic computer skills - **NO coding background** required

Focus Split

30% Concepts + 70% No-Code **Practical Tools**

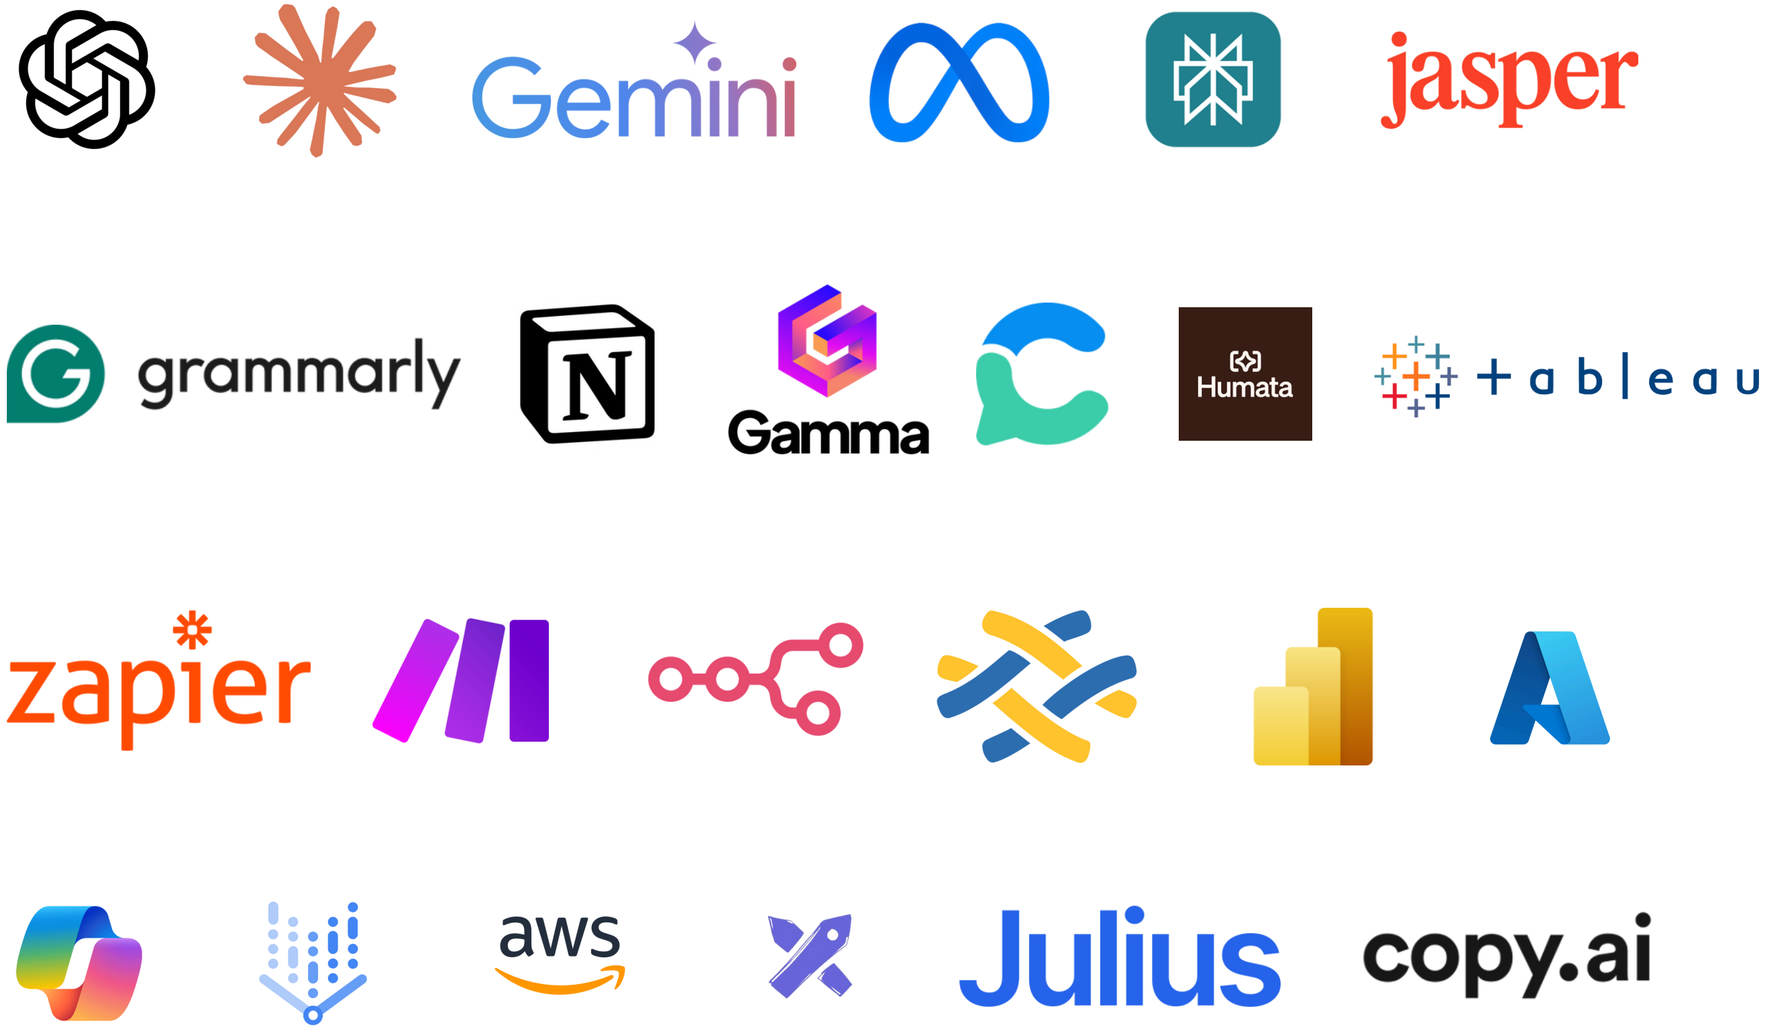

Career Impact

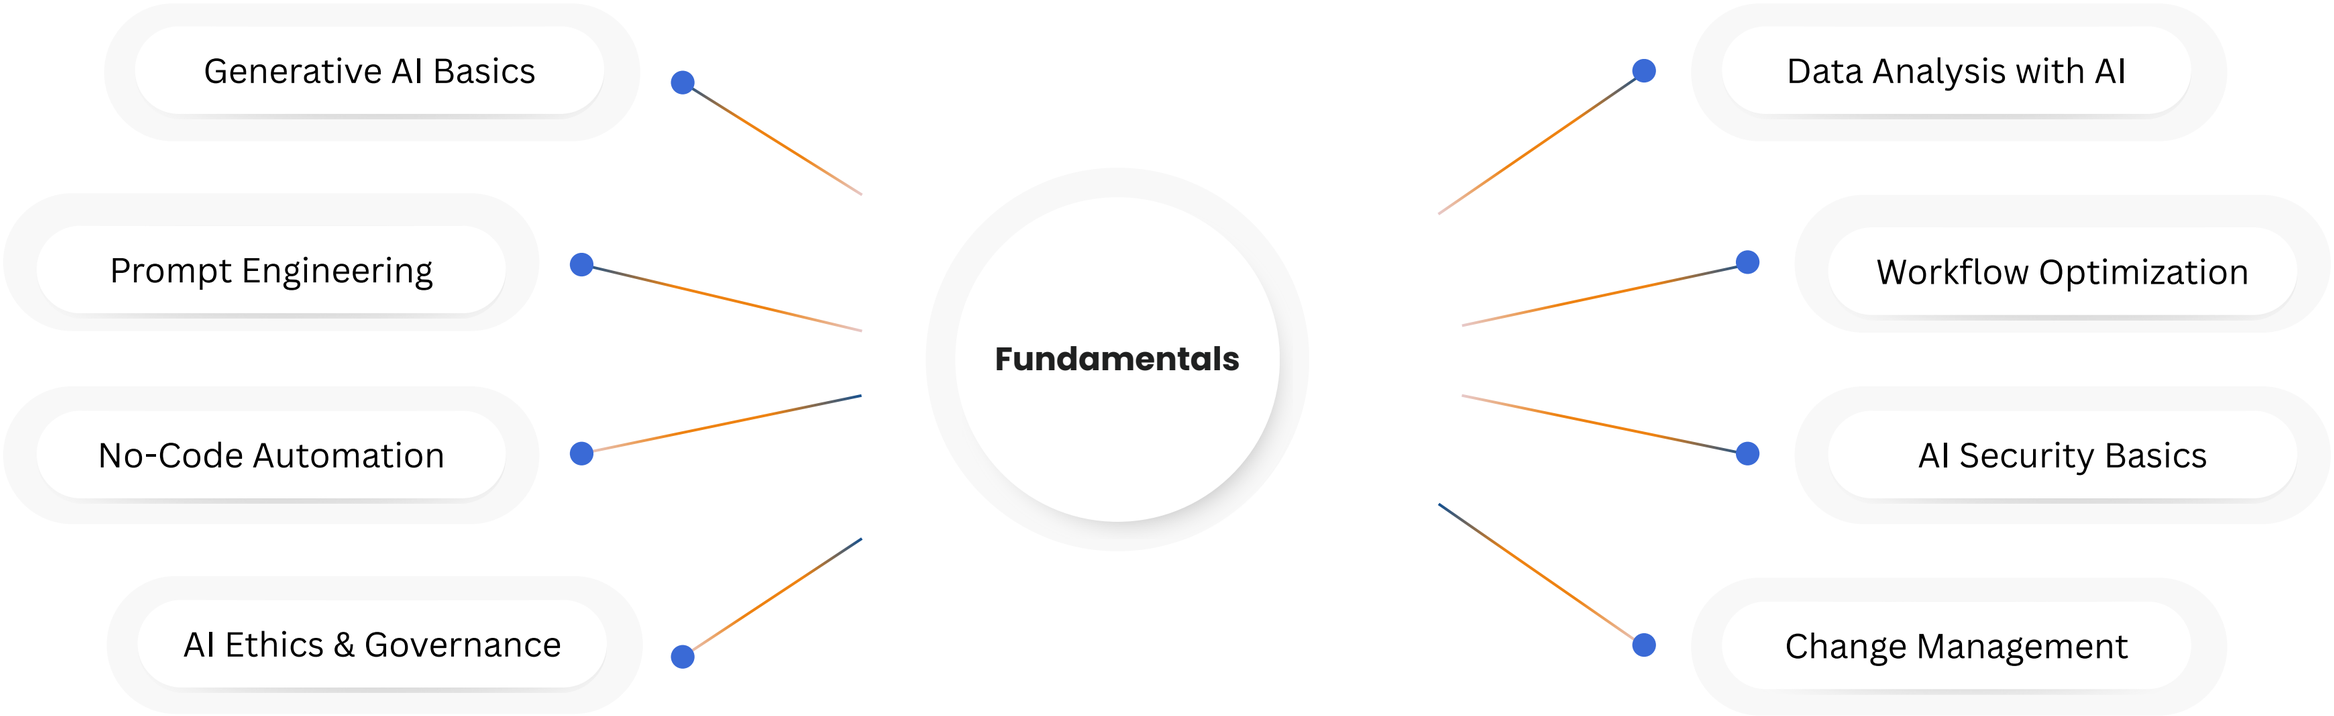

Immediate workplace application and **competitive** advantage

KRISH NAIK ACADEMY

Tools

This program focuses on **practical**, no-code AI tools that **professionals & leaders** can immediately apply to enhance productivity, decision-making, and workflow automation. You'll master platforms for content creation, data analysis, research, and process automation all tailored for **non-technical professionals**.

Generative AI Basics
Prompt Engineering
No-Code Automation
AI Ethics & Governance
Fundamentals
Data Analysis with AI
Workflow Optimization
AI Security Basics
Change Management

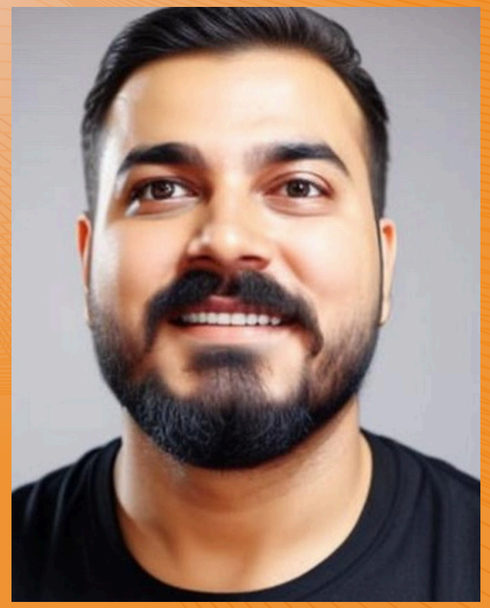

Who This Program Is For?

If you've ever wanted to learn AI without diving into complex code — and instead, confidently apply it to transform your work, career, or business — this course is your roadmap.
Designed for everyone from first time users to leaders, executives, and decision-makers who are ready to harness the power of AI for real-world impact, without getting technical.
Whether you're an enthusiast or a CEO, VP, Director, or Manager leading strategy, innovation, or program manager — this is perfect for you.

- Make smart, strategic AI decisions without getting lost in technical jargon
- Implement AI tools to automate workflows, analyze data, and enhance productivity
- Confidently lead AI adoption across teams, while managing risks and ethical concerns

No coding. Just clear, actionable AI insights that empower you to lead with confidence in an AI-driven world.

KRISH NAIK ACADEMY

Curriculum

Generative AI Fundamentals

Visually understand AI's core concepts and professional impact through interactive learning.

Generative AI Explained Visually

Learn how AI works through live drawings and before/after process comparisons.

Core AI Concepts (Tokens, Models, RAG)

Master tokens, model selection, and RAG with cost-optimization strategies.

- Visual explanation
- Process transformation
- Cost analysis
- Model evaluation

AI Tool Mastery

Leverage ChatGPT and position yourself as an AI-augmented professional.

ChatGPT Complete Mastery

Unlock advanced features, custom workflows, and role-specific automations.

AI Landscape & Career Positioning

Adapt to AI-driven industry shifts and build your professional brand.

- Prompt engineering
- Workflow design
- Career strategy
- Stakeholder communication

Curriculum

Professional AI Tools

Implement writing, research, and analysis tools for role-specific workflows.

AI Writing & Communication Tools

Deploy Jasper, Grammarly, and Gamma for content/presentation creation.

AI Research & Analysis Tools

Use Perplexity, Julius, and Tableau AI for data-driven insights.

- Content automation
- Tool selection
- Research optimization
- Data visualization

No-Code Automation

Build advanced workflows with Zapier, Make, and n8n for business tasks.

Zapier Deep Dive

Create multi-step automations between AI tools and business apps.

Make & n8n Advanced Workflows

Develop branching automations and open-source solutions.

- Workflow design
- Error handling
- API integration
- Visual workflow building

Curriculum

Advanced AI Techniques

Optimize prompts, manage context, and engineer custom AI solutions.

Advanced Prompt Engineering

Craft perfect prompts with chain-of-thought and few-shot techniques.

Context Engineering

Design persistent AI assistants for long-term projects.

- Output consistency
- A/B testing
- Memory management
- Knowledge integration

AI Workflow Development

Build, optimize, and scale custom AI-powered business solutions.

Custom AI Workflow Creation

Combine AI tools with APIs for unique business needs.

AI Optimization & Scaling

Monitor performance and deploy AI across teams cost-effectively.

- End-to-end integration
- Error handling
- ROI analysis
- Change management

Projects

End to End Marketing Team

An AI team created to handle entire marketing of a company.

Total No-code Automation with AI Agents

Create a team without a single line of code and make it handle entire marketing flow.

Connect multiple applications

Design persistent AI assistants for long-term projects.

No-Code | Virutal Team | RAG Integration | 5+ Apps

AI Personal Assistant

Create a personal assistant to help you out with all your day-to-day workflow

Custom AI Workflow Creation

Combine AI tools with APIs for unique persinal and business tasks.

Automate Email, Calendar and Applications

Automate daily task and spend your effort on the most important one.

End-to-end integration | Common Apps | Agentic AI | Peronalized

Curriculum

Business Transformation

Redesign processes and lead AI adoption for measurable impact.

Business Process Transformation

Apply AI to customer, marketing, and operations workflows.

Team AI Adoption

Overcome resistance and build AI literacy in teams.

- Process redesign
- Case analysis
- Training strategies
- Culture change

AI Leadership

Showcase mastery, future-proof skills, and lead continuous innovation.

AI Mastery Showcase

Present implementations and refine systems through peer feedback.

Future of AI Excellence

Stay ahead with emerging trends and community networks.

- Solution validation
- Optimization
- Continuous learning
- Thought leadership
